

Customer Segmentation Project Report

Objective

Segment customers into groups based on Annual Income and Spending Score using Machine Learning.

Tools Used

Python, Pandas, Scikit-Learn, Matplotlib

Methodology

1. Create customer dataset.
2. Select features.
3. Apply K-Means Clustering.
4. Generate customer segments.
5. Visualize results.

Expected Outcome

Identify High Value, Medium Value, and Low Value customer groups.

Conclusion

Customer segmentation helps businesses understand customer behavior and improve marketing strategies.
